

CASE STUDY

GARNER DECONTAMINATION SOLUTIONS

GARNER provides rapid and verifiable biological decontamination services to a variety of industries including Life Sciences, Pharmaceutical, Healthcare, First Responders, Public/Private Transportation and Public Facilities.

Their vehicle decontamination facility located near the Houston Medical Center is capable of safely decontaminating multiple vehicles including ambulances, fire/rescue and police vehicles, school busses, 53' refrigerated trailers, Metro Busses, and other critical assets to surgical sterility in two hours or less. It also provides decontamination of blood borne pathogens typically associated with vehicles involved in accidents.

Xpedite Coatings provided a polyaspartic coating to over 3,000 square feet of concrete floor at their new facility in Houston. The job was done in two days, including surface prep and coating. This allowed Garner to operate their facility without delay, 24 hours after the job was finished.
