Over 100 potholes and spalled
concrete spots were repaired

RIGHT

Our epoxy concrete is the right product to repair potholes and spalled concrete at ramps subject to heavy traffic. The holes are repaired in a way that they are perfectly level with pavement, providing years of service.

RIGHT AND BELOW

Once spalled concrete is cleared, the cavity to be filled becomes apparent. It is thoroughly cleaned and primed and then filled with 100% solid epoxy concrete designed to repair heavily damaged concrete with a quick turn-around. The product can be formed, molded or shaped making it ideal for curbs, damaged concrete and new construction. Compressive strength is 8,000 to 10,000 psi.
